Cart Vending Services, Inc

Vending Systems for malls and airports

The CVS Mall Cart System is a self service vend system. Patrons rent carts at their own convenience.

Rental cost is controlled by the manager through the vend system. The manager has full control over the set fee of the system. Maintenance is minimal. CVS service plans are available to keep the system running smoothly.

to discuss our Cart Vending System
for your Airports or Shopping Centers.

How it works...

Upon proper payment, cart is released from storage rail. An electronic counter system records revenue.

Coins, paper money or optional credit card payment is made. All revenue is retained by management.

Keep your stock of carts plentiful and your space clear of cluttered carts by offering a return reward.

Specifications

Cart Vend System: Automated, electronic vending unit with mounted tracks for interior or exterior installation. An electrical requirement of 120 VAC is required for system operation.

The housing of the vend unit is fabricated from stainless steel 39" H.

System accepts domestic or foreign currency along with credit cards. Dispensing capacity is 2000 coins.

Track System: Heavy gauge stainless steel designed to store carts. Expandable track system allows for future additions.

Cart Return Unit: System dispenses a coin reward once cart is returned to the track system.

Mall Cart: Equipped with basket for small items, child seat and bottom platform for larger items.
